FOREWORD

All producers listed in this directory have affirmed that seed planted on fields for which certification was requested was foundation, registered or certified. The history of all such seed has been checked through the records of the Missouri Crop Improvement Association and all fields examined prior to harvest by a competent inspector. Final certification requires seed to be conditioned and a certified tag or certificate to be attached to each bag, container or bulk storage unit. More detailed information describing an individual source may be obtained from the producer or the MCIA office.

Certification may be completed by the producer, or if desired, he may have the seed cleaned by an Approved Certified Seed Conditioner and stored to await final sampling and certification.

Seed from fields that have met the requirements for field inspection may be transferred in bulk (unconditioned form) only after formal approval is granted by the Missouri Crop Improvement Association. Please contact the MCIA office for the appropriate transfer forms. All Missouri certified seed must be conditioned by a MCIA approved conditioning facility.

2020 Officers and Staff Missouri Crop Improvement Association

| | |
|---|------------------------------|
| President | Rennie Davis, Vandalia |
| Vice President | E. L. Reed, Chillicothe |
| Director | Bruce Strobel, Concordia |
| Director | Thomas Lee, Columbia |
| Director | Lynn Andrews, Carthage |
| Director | Dan Weber, Marshall |
| Director | Kevin Mainord, East Prairie |
| Director | Pam Rowland, Dudley |
| Director | Eddie Hoff, Boonville |
| Executive Director | Richard Arnett, Columbia |
| Assistant Director/Field Services Manager | Mark Quisenberry, Columbia |
| Laboratory Services Manager | Trent Hall, RST, Columbia |
| Laboratory Supervisor | Marshal Reidlinger, Columbia |
| Laboratory Assistant | Robin Crane, Columbia |
| Laboratory Assistant | Brianne Arnett, Columbia |

Purpose of Seed Certification

The purpose shall be to maintain and make available seed and propagating material of varieties so grown and distributed as to insure genetic purity and identity. To accomplish this, the Missouri Crop Improvement Association has adopted a limited generation program of seed certification that encompasses four recognized classes of seed; Breeder, Foundation, Registered and Certified.

Breeder's seed is original seed of a variety developed by the originator, which remains in his/her control. Foundation seed is the progeny of Breeder's seed. Registered seed is the progeny of Foundation seed. Certified seed may be the progeny of either Foundation or Registered seed. The limited generation system means that Certified seed should not be more than three generations removed from original Breeder's seed unless it is produced under re-certification provisions.

Certified seed may not be re-certified, except for varieties where Foundation seed is no longer maintained or in the event an emergency is declared stating there is inadequate Foundation or Registered seed supplies to plant the needed Certified acreage of a variety.

Authority

The Missouri Crop Improvement Association is designated annually as the official seed certifying agency for the State of Missouri by the Director of the Missouri Agricultural Experiment Station as provided for in Section 266.095 of the Missouri Seed Law.

Eligibility Requirements

The Missouri Crop Improvement Association will accept as eligible for certification any variety which:

1. Is released by the Missouri Agricultural Experiment Station
2. Is recommended by the National Crop Variety Review Board
3. Is approved by the Plant Variety Protection Office
4. Has been accepted for certification by any member agency of AOSCA
5. Is determined to be eligible by the MCIA Certification Committee

Production

All Missouri Certified Seed is produced under the guidelines established by the MCIA Board of Directors for the production of Certified seed and adheres to the quality standards as published in the Missouri Seed Certification handbook. Only qualified Missouri producers and seedsmen approved by the MCIA Board of Directors are eligible to produce Missouri Certified Seed.

Inspection

All seed sold as Certified must meet the published standards for both field inspection and laboratory testing. Each production field of Missouri Certified Seed will be inspected one or more times in the field prior to harvest by a competent, qualified inspector. Each seed lot of Missouri Certified Seed will be inspected in the laboratory after conditioning to determine that the seed meets the minimum varietal and mechanical (germination, pure seed, etc...) purity standards established for that crop.

Labeling

An official tag or label of the MCIA must be attached to each container of seed sold as Certified. If Certified seed is sold in bulk form, an official certificate from the MCIA must accompany the seed at the time of sale. Seed should not be accepted as Certified without an official label or certificate, regardless of the claims of the seller.

The purpose of this booklet is to provide producers and seedsmen with a convenient reference of the sources of Certified seed. For additional copies or information not provided in this booklet, please contact:

Protected Varieties Certified in Missouri

The following list contains varieties applied for certification in Missouri for which the owner has applied and/or received a certificate of Plant Variety Protection. In either case, no one may offer for sale, sexually multiply or use to produce a hybrid, seed of these varieties without the permission of the owner or applicant. Seed of varieties for which the originator has invoked U.S. Plant Variety Protection may be sold by variety name only.

This is not a complete listing of all protected varieties, only those varieties for which certification by the Missouri Crop Improvement Association has been applied for. A complete listing of all protected varieties may be obtained by contacting:

Quality Assurance Program

MCIA's Quality Assurance® (QA) program is offered to seed producers desiring unbiased, third-party inspection and testing program quality control services for branded seed products that do not meet eligibility requirements for certification. The QA program mirrors the traditional certification program in all aspects of field inspection and laboratory testing. Please contact the MCIA office for more details on the QA program or any seed products carrying MCIA's QA label.

Source Identified Program

MCIA's Source Identified program is available for indigenous or non-indigenous trees, shrubs, vines and herbaceous plants such as grasses and forbs, including wildflowers. This program assures the proper identity and purity of native and naturalized plants that are needed to re-vegetate, restore, improve or stabilize wildland plant communities. The standards are designed to:

1. Verify the genus, species and ecotype characteristics of the original source plants.
2. Track the genetic status and properly label these germplasm accessions whether marketed as original wildland collections or as a product of field seed increase through one or more generations.

WILLIAMS 82 is a late group III indeterminate variety (RM 3.9) that averages 40” in height. It has white flowers, brown pubescence, tan pods and yellow seed with shiny luster and black hila. Williams 82 is resistant to bacterial pustule and Races 1-9, 10,13,14 and 15 of phytophthora root rot

Foundation Class

Missouri Foundation Seeds Columbia, MO (573) 884-7333

MATURITY GROUP IV

MPV 4238N is an early to mid-group IV indeterminate variety (RM 4.3) that averages 39” in height with white flowers, tawny pubescence and black hila seed. MPV 4238N is rated resistant to races 3 and 14 of soybean cyst nematode (SCN) and moderately susceptible to sudden death syndrome (SDS). MPV 4238N has demonstrated significant yield advantages over the variety Maverick in both infested and non-infested SCN environments in replicated performance testing.

SS-C-483 is a late group IV variety (RM = 4.8) with light tawny pubescence, tan pods and black hila seed.

Quality Assurance Class

Stoddard County Seed Service Dudley, MO (573) 524-6666

STODDARD is a late group IV determinate variety (RM 4.9) that averages 28” in height. It has white flowers, tawny pubescence, tan pods and black hila seed. Stoddard has shown moderate resistance to races 1, 2, 3, 5 and 14 of soybean cyst nematode and has also exhibited moderate resistance to root knot nematode. It is moderately resistant to sudden death syndrome (SDS) and stem canker and is moderately susceptible to phytophthora root rot. Yields of Stoddard have been superior to Manokin by an average of 3-6 bu/ac on loam, clay and sandy soils in replicated testing.

MATURITY GROUP V

DUDLEY is an early group V determinate variety (RM 5.1) that averages 30” in height. It has white flowers, tan pods, tawny pubescence and black hila seed that averages approximately 3,200 seeds per pound. Dudley is moderately resistant to races 1,2,3,5 & 14 of soybean cyst nematode (SCN), sudden death syndrome (SDS), stem canker, root knot nematode and reniform nematode, while exhibiting resistance to frogeye leaf spot. It rates 1.2 for emergence and 2.3 for lodging on a scale of 1-5 with 1 being best.

JAKE is a mid-group V determinate variety (RM 5.4) that averages 32” in height. It has purple flowers, tawny pubescence, tan pods and black hila seed. Jake has shown resistance to races 1, 2, 3, 5 and 14 of soybean cyst nematode, is resistant to reniform nematode and has shown moderate resistance to root knot nematode. It is moderately resistant to sudden death syndrome (SDS) and stem canker and is susceptible to phytophthora root rot. Yields of Jake have equaled Anand on loam soils, but have averaged approximately 7 bu/ac more on clay and sand in Missouri tests. Jake has been superior in yield compared to Anand in Mississippi, Arkansas and Tennessee State AES trials.

MOMENTUM 52C06 is an early group V determinate variety (RM 5.2) that is considered short in height (30”). It has purple flowers, tawny pubescence, tan pods and black hila seed averaging approximately 2,900 seeds/lb. It is resistant to SCN races 1,2,3,5 & 14, and moderately resistant to SDS. In addition to broad SCN resistance, Momentum 52C06 is resistant to root knot nematode, reniform nematode, frogeye leaf spot and stem canker. It has a chloride excluder that provides salt tolerance and also field tolerance to phytophthora root rot.

MOMENTUM 46G08 is a mid-group IV indeterminate variety (RM 4.6) that averages 34” in height. It has white flowers, tawny pubescence, tan pods and black hila seed that average 3,300 seeds/lb. Momentum 46G08 is resistant to stem canker and frogeye leaf spot , moderately susceptible to SCN and root knot nematode, and has field tolerance to phytophthora root rot.

Quality Assurance Class

Dale Kinneman Fredericktown, MO (573) 783-3070

MOMENTUM 49G06 is a late group IV semi determinate variety (RM 4.9) that averages 33” in height. It has purple flowers, tawny pubescence, tan pods and black hila seed that average 3,200 seeds/lb. Momentum 49G06 has moderate resistance to SCN races 1,2,3,5 & 14 and SDS. It has field tolerance to phytophthora root rot, moderate resistance to root knot nematode and resistance to stem canker, frogeye leaf spot and reniform nematode while containing a chloride excluder for salt tolerance.

|-------------------|------------|----------------|

SABER (1994 PVP – Title V Protected) is an early maturing variety with light yellow kernels similar to ‘Ogle’ and was derived from the cross of ‘Tack’ and ‘Spurs’. It is approximately 2 days earlier in maturity than ‘Jay’ with a heading date the same as ‘Don’ and is approximately 4cm taller than both ‘Jay’ and ‘Don’ and 4cm shorter than ‘Chaps’. Saber is tolerant to barley yellow dwarf virus, moderately resistant/moderately susceptible to crown rust and is susceptible to loose smut. Test weight of Saber is very good and has been approximately 1.4 lbs/bu higher than ‘Jay’ and 2.2 lbs/bu higher than ‘Chaps’.

Tanner Seed Company, LLC

Bernie, MO

(573) 276-2286

CL111 (1994 PVP Protected) is a very early maturing, short stature long grain variety with moderate resistance to lodging for use in the Clearfield rice production system. It is approximately the same height as CL151 & CL161 and is 13 cm taller than CL131. CL111 is susceptible to sheath blight & blast and moderately susceptible to straighthead disorder.

Registered & Certified Class

Horizon Ag, LLC

Memphis, TN

866-237-6167

CL151 (1994 PVP – Title V Protected) is a semi-dwarf long grain rice variety that can be used with the Clearfield rice production system. It is 8 cm shorter than CL161 and 10 cm taller than CL131. It has purple apiculus and the color fades as grains approach maturity. The lemma and palea are straw-colored and glabrous and the bran is light brown. CL151 is susceptible to sheath blight, and moderately susceptible to blast and bacterial panicle blight.

Registered & Certified Class

Horizon Ag, LLC

Memphis, TN

866-237-6167

CL153 (1994 PVP – Title V Protected) is an early maturing, semi-dwarf, long grain Clearfield variety. It averages 38” in height (same as CL111 and CL151) and matures four days earlier than CL111 and one day later than CL151. CL153 is susceptible to sheath blight, moderately susceptible to bacterial panicle blight, cercospora & straighthead and moderately resistant to blast.

Registered & Certified Class

Horizon Ag, LLC

Memphis, TN

866-237-6167

CLL15 is an early maturing, semi-dwarf (38”), long grain variety which appears to have good yield potential, good milling qualities, good straw strength and improved blast resistance when compared to current commercial CL varieties CL151, CL153 and CL172. It averages 38” in height (slightly taller than CL172 but slightly shorter than CL151 & CL153) and matures similar to CL151 but earlier than both CL153 and CL172.

Registered & Certified Class

Horizon Ag, LLC

Memphis, TN

PEANUTS

297 (1994 PVP – Title V Protected) is an extra-large seeded runner-type peanut with high oleic oil chemistry developed by the University of Florida. Released in 2014, this variety has demonstrated very good resistance to white mold, good resistance to TSWV, but is susceptible to leaf spot. It has a prominent center stem with semi-prostate growth habit.

Registered Class

Delta Peanut, LLC

Jonesboro, AR

(806) 759-7674

331 (1994 PVP – Title V Protected) is a large seeded, medium maturity runner-type peanut with high oleic oil chemistry. Yield potential is similar to Georgia-12Y. It is moderately resistant to white mold, leaf spot and TSWV. The seed size is similar to Georgia-06G. Growth habit is semi-erect with a prominent main stem at digging. Foliage is light green, and the fruiting habit is alternate.

Registered & Certified Class

Delta Peanut, LLC

Jonesboro, AR

(806) 759-7674

GEORGIA-06G (1994 PVP – Title V Protected) is a large-seeded, runner-type peanut variety that was released in 2006 by the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-06G has a high level of resistance to TSWV. Georgia-06G combines high TSWV resistance with medium maturity and excellent yield and high TSMK grade.

Registered & Certified Class

Delta Peanut, LLC

Jonesboro, AR

(806) 759-7674

GEORGIA-09B (1994 PVP – Title V Protected) is a high-yielding, high oleic, TSWV-resistant, medium-seeded, runner-type peanut variety that was released in 2009 by the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia. Georgia-09B has a high level of resistance to spotted wilt disease caused by TSWV. Georgia-09B also has the high oleic and low linoleic fatty acid ratio for improved oil quality and longer shelf-life of peanut and peanut products. Georgia-09B originated from the first backcross made with Georgia Green as the recurrent parent. It has an intermediate runner growth habit and medium maturity, similar to Georgia Green. Georgia-09B has a medium runner seed size as compared to the larger-seeded, high oleic, runner-type variety, Florida-07.
