## FOREWORD

All producers listed in this directory have affirmed that seed planted on fields for which certification was requested was foundation, registered or certified. The history of all such seed has been checked through the records of the Missouri Crop Improvement Association and all fields examined prior to harvest by a competent inspector. Final certification requires seed to be conditioned and a certified tag or certificate to be attached to each bag, container or bulk storage unit. More detailed information describing an individual source may be obtained from the producer or the MCIA office.

Certification may be completed by the producer, or if desired, he may have the seed cleaned by an Approved Certified Seed Conditioner and stored to await final sampling and certification.

Seed from fields that have met the requirements for field inspection may be transferred in bulk (unconditioned form) only after formal approval is granted by the Missouri Crop Improvement Association. Please contact the MCIA office for the appropriate transfer forms. All Missouri certified seed must be conditioned by a MCIA approved conditioning facility.

### 2021 Officers and Staff Missouri Crop Improvement Association

President .....	Rennie Davis, Vandalia
Vice President .....	E. L. Reed, Chillicothe
Director .....	Bruce Strobel, Concordia
Director .....	Thomas Lee, Columbia
Director .....	Lynn Andrews, Carthage
Director .....	Dan Weber, Marshall
Director .....	Kevin Mainord, East Prairie
Director .....	Pam Rowland, Dudley
Director .....	Eddie Hoff, Boonville
Executive Director .....	Richard Arnett, Columbia
Assistant Director/Field Services Manager .....	Mark Quisenberry, Columbia
Laboratory Services Manager .....	Trent Hall, RST, Columbia
Laboratory Supervisor .....	Marshal Reidlinger, Columbia
Laboratory Assistant .....	Robin Crane, Columbia
Laboratory Assistant .....	Cory Arnett, Columbia

### Purpose of Seed Certification

The purpose shall be to maintain and make available seed and propagating material of varieties so grown and distributed as to insure genetic purity and identity. To accomplish this, the Missouri Crop Improvement Association has adopted a limited generation program of seed certification that encompasses four recognized classes of seed; Breeder, Foundation, Registered and Certified.

Breeder's seed is original seed of a variety developed by the originator, which remains in his/her control. Foundation seed is the progeny of Breeder's seed. Registered seed is the progeny of Foundation seed. Certified seed may be the progeny of either Foundation or Registered seed. The limited generation system means that Certified seed should not be more than three generations removed from original Breeder's seed unless it is produced under re-certification provisions.

Certified seed may not be re-certified, except for varieties where Foundation seed is no longer maintained or in the event an emergency is declared stating there is inadequate Foundation or Registered seed supplies to plant the needed Certified acreage of a variety.

## **Authority**

The Missouri Crop Improvement Association is designated annually as the official seed certifying agency for the State of Missouri by the Director of the Missouri Agricultural Experiment Station as provided for in Section 266.095 of the Missouri Seed Law.

## **Eligibility Requirements**

The Missouri Crop Improvement Association will accept as eligible for certification any variety which:

1. Is released by the Missouri Agricultural Experiment Station
2. Is recommended by the National Crop Variety Review Board
3. Is approved by the Plant Variety Protection Office
4. Has been accepted for certification by any member agency of AOSCA
5. Is determined to be eligible by the MCIA Certification Committee

## **Production**

All Missouri Certified Seed is produced under the guidelines established by the MCIA Board of Directors for the production of Certified seed and adheres to the quality standards as published in the Missouri Seed Certification handbook. Only qualified Missouri producers and seedsmen approved by the MCIA Board of Directors are eligible to produce Missouri Certified Seed.

## **Inspection**

All seed sold as Certified must meet the published standards for both field inspection and laboratory testing. Each production field of Missouri Certified Seed will be inspected one or more times in the field prior to harvest by a competent, qualified inspector. Each seed lot of Missouri Certified Seed will be inspected in the laboratory after conditioning to determine that the seed meets the minimum varietal and mechanical (germination, pure seed, etc...) purity standards established for that crop.

## **Labeling**

An official tag or label of the MCIA must be attached to each container of seed sold as Certified. If Certified seed is sold in bulk form, an official certificate from the MCIA must accompany the seed at the time of sale. Seed should not be accepted as Certified without an official label or certificate, regardless of the claims of the seller.

The purpose of this booklet is to provide producers and seedsmen with a convenient reference of the sources of Certified seed. For additional copies or information not provided in this booklet, please contact:

Executive Director  
Missouri Crop Improvement Association  
3211 Lemone Industrial Blvd.

## Protected Varieties Certified in Missouri

The following list contains varieties applied for certification in Missouri for which the owner has applied and/or received a certificate of Plant Variety Protection. In either case, no one may offer for sale, sexually multiply or use to produce a hybrid, seed of these varieties without the permission of the owner or applicant. Seed of varieties for which the originator has invoked U.S. Plant Variety Protection may be sold by variety name only.

This is not a complete listing of all protected varieties, only those varieties for which certification by the Missouri Crop Improvement Association has been applied for. A complete listing of all protected varieties may be obtained by contacting:

## Quality Assurance Program

MCIA's Quality Assurance® (QA) program is offered to seed producers desiring unbiased, third-party inspection and testing program quality control services for branded seed products that do not meet eligibility requirements for certification. The QA program mirrors the traditional certification program in all aspects of field inspection and laboratory testing. Please contact the MCIA office for more details on the QA program or any seed products carrying MCIA's QA label.

## Source Identified Program

MCIA's Source Identified program is available for indigenous or non-indigenous trees, shrubs, vines and herbaceous plants such as grasses and forbs, including wildflowers. This program assures the proper identity and purity of native and naturalized plants that are needed to re-vegetate, restore, improve or stabilize wildland plant communities. The standards are designed to:

1. Verify the genus, species and ecotype characteristics of the original source plants.
2. Track the genetic status and properly label these germplasm accessions whether marketed as original wildland collections or as a product of field seed increase through one or more generations.

## Alphabetical Listing of Producers

### **Belt Seed Company**

Jim Belt  
110 E Middle Street  
Leonard, MO 63451  
(660) 762-4279

### **Callaway Seed, LLC**

Josh Lehenbauer  
1085 State Road M

## CONVENTIONAL SOYBEANS

### MATURITY GROUP II

**LVF 2630** is a 2.6 relative maturity variety with gray pubescence, brown pods and gray hila seed.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

### MATURITY GROUP III

**GV 39C9** is a late group III indeterminate variety (RM 3.9) that averages 34" and has purple flowers, grey pubescence, tan pods and imperfect black hila seed that average 3,000 seeds per pound. It has PI88788 soybean cyst nematode resistance and is field tolerant to phytophthora. GV 39C9 is moderately resistant to SDS, stem canker and frogeye leaf spot.

Quality Assurance Class

Green Valley Seed, LLC

Kahoka, MO

(660) 727-3341

**LVF 3039** is a 3.0 relative maturity variety with light tawny pubescence, brown pods and brown hila seed.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

**LVF 3530** is a 3.5 relative maturity variety with light tawny pubescence, brown pods and black hila seed.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

**LVF 3640** is a 3.6 relative maturity variety with gray pubescence, brown pods and yellow hila seed.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

**RVS 3905** is a late group III indeterminate variety (RM 3.9) that averages 35” in height. It has purple flowers, grey pubescence, brown pods and imperfect black hila seed. RVS 3905 is listed as having field tolerance to phytophthora root rot, resistance to races 3 and 14 of SCN and is moderately susceptible to SDS, stem canker & frogeye leaf spot.

Quality Assurance Class

River Valley Ag Exchange                      Marshall, MO                      (660) 886-4394

**SA13-1310** is an established 3.9 maturity conventional variety release from the University of Missouri available for production under a Momentum brand number or a private label. Agronomic and performance data can be obtained at <https://www.omagdigital.com/publication/?m=46390&i=683275&p=1> or contact Missouri the MCIA office to obtain licensing information.

Parent Class

Missouri Foundation Seeds                      Columbia, MO                      (573) 884-7333

**SA13-1363** is an established 3.9 maturity conventional variety release from the University of Missouri available for production under a Momentum brand number or a private label. Agronomic and performance data can be obtained at <https://www.omagdigital.com/publication/?m=46390&i=683275&p=1> or contact Missouri the MCIA office to obtain licensing information.

Parent Class

Missouri Foundation Seeds                      Columbia, MO                      (573) 884-7333

**SA13-2699** is a new 3.9 maturity conventional variety release from the University of Missouri available for production under a Momentum brand number or a private label. Agronomic and performance data can be obtained at <https://www.omagdigital.com/publication/?m=46390&i=683275&p=1> or contact Missouri the MCIA office to obtain licensing information.

Parent Class

Missouri Foundation Seeds                      Columbia, MO                      (573) 884-7333

**SA14-9653** is an established 3.6 maturity conventional variety release from the University of Missouri available for production under a Momentum brand number or a private label. Agronomic and performance data can be obtained at <https://www.omagdigital.com/publication/?m=46390&i=683275&p=1> or contact Missouri the MCIA office to obtain licensing information.

Parent Class

Missouri Foundation Seeds                      Columbia, MO                      (573) 884-7333

**SHOW ME SOY 3910C** is a late group III indeterminate variety (RM 3.9) that averages 35” in height. It has white flowers, grey pubescence, brown pods and imperfect black hila seed. Show Me Soy 3901C is listed as having field tolerance to phytophthora root rot, resistance to races 3 and 14 of SCN and is moderately susceptible to SDS, stem canker & frogeye leaf spot.

Foundation Class

Missouri Foundation Seeds                      Columbia, MO                      (573) 884-7333

Certified Class

Callaway Seed, LLC                              Auxvasse, MO                      (573) 387-4827

**WILLIAMS 82** is a late group III indeterminate variety (RM 3.9) that averages 40” in height. It has white flowers, brown pubescence, tan pods and yellow seed with shiny luster and black hila. Williams 82 is resistant to bacterial pustule and Races 1-9, 10,13,14 and 15 of phytophthora root rot

Foundation Class

Missouri Foundation Seeds                      Columbia, MO                      (573) 884-7333

**MATURITY GROUP IV**

**MPV 4238N** is an early to mid-group IV indeterminate variety (RM 4.3) that averages 39” in height with white flowers, tawny pubescence and black hila seed. MPV 4238N is rated resistant to races 3 and 14 of soybean cyst nematode (SCN) and moderately susceptible to sudden death syndrome (SDS). MPV 4238N has demonstrated significant yield advantages over the variety Maverick in both infested and non-infested SCN environments in replicated performance testing.

Quality Assurance Class

Davis Seed Farms, Inc.                              Vandalia, MO                      (573) 594-3222  
El-Par Seeds    Versailles, MO                      (573) 378-4540

**RVS 4104** is an early group IV indeterminate variety (RM 4.1) that averages 37” in height. It has white flowers, grey pubescence, brown pods and buff hila seed. RVS 4104 is listed as having resistance to phytophthora root rot, SCN races 3 and 14, SDS, stem canker and charcoal rot. It is susceptible to frogeye leaf spot, root-knot nematode and reniform nematode. RVS 4104 has the chloride includer for salt tolerance and has demonstrated tolerance to metribuzin.

Quality Assurance Class

River Valley Ag Exchange                      Marshall, MO                      (660) 886-4394

**S13-2743C** is an established 4.1 maturity conventional variety release from the University of Missouri available for production under a Momentum brand number or a private label. Agronomic and performance data can be obtained at <https://www.omagdigital.com/publication/?m=46390&i=683275&p=1> or contact Missouri the MCIA office to obtain licensing information.

Parent Class

Missouri Foundation Seeds                      Columbia, MO                      (573) 884-7333

**S13-3851C** is an established 4.4 maturity conventional variety release from the University of Missouri available for production under a Momentum brand number or a private label. Agronomic and production information can be obtained at <https://www.omagdigital.com/publication/?m=46390&i=683275&p=1> or contact Missouri the MCIA office to obtain licensing information.

Parent Class

Missouri Foundation Seeds                      Columbia, MO                      (573) 884-7333

**S13-10590C** is a new 4.3 maturity conventional variety release from the University of Missouri available for production under a Momentum brand number or a private label. Agronomic and performance data can be obtained at <https://www.omagdigital.com/publication/?m=46390&i=683275&p=1> or contact Missouri the MCIA office to obtain licensing information.

Parent Class

Missouri Foundation Seeds                      Columbia, MO                      (573) 884-7333

**S13-10592C** is a new 4.5 maturity conventional variety release from the University of Missouri available for production under a Momentum brand number or a private label. Agronomic and performance data can be obtained at <https://www.omagdigital.com/publication/?m=46390&i=683275&p=1> or contact Missouri the MCIA office to obtain licensing information.

Parent Class

**MATURITY GROUP V**

**DUDLEY** is an early group V determinate variety (RM 5.1) that averages 30" in height. It has white flowers, tan pods, tawny pubescence and black hila seed that averages approximately 3,200 seeds per pound. Dudley is moderately resistant to races 1,2,3,5 & 14 of soybean cyst nematode (SCN), sudden death syndrome (SDS), stem canker, root knot nematode and reniform nematode, while exhibiting resistance to frogeye leaf spot. It rates 1.2 for emergence and 2.3 for lodging on a scale of 1-5 with 1 being best.

Quality Assurance Class

Stoddard County Seed Service                      Dudley, MO                      (573) 524-6666

**JAKE** is a mid-group V determinate variety (RM 5.4) that averages 32” in height. It has purple flowers, tawny pubescence, tan pods and black hila seed. Jake has shown resistance to races 1, 2, 3, 5 and 14 of soybean cyst nematode, is resistant to reniform nematode and has shown moderate resistance to root knot nematode. It is moderately resistant to sudden death syndrome (SDS) and stem canker and is susceptible to phytophthora root rot. Yields of Jake have equaled Anand on loam soils, but have averaged approximately 7 bu/ac more on clay and sand in Missouri tests. Jake has been superior in yield compared to Anand in Mississippi, Arkansas and Tennessee State AES trials.

Stoddard County Seed Service	Dudley, MO	(573) 624-6666
------------------------------	------------	----------------

**MOMENTUM 52C06** is an early group V determinate variety (RM 5.2) that is considered short in height (30”). It has purple flowers, tawny pubescence, tan pods and black hila seed averaging approximately 2,900 seeds/lb. It is resistant to SCN races 1,2,3,5 & 14, and moderately resistant to SDS. In addition to broad SCN resistance, Momentum 52C06 is resistant to root knot nematode, reniform nematode, frogeye leaf spot and stem canker. It has a chloride excluder that provides salt tolerance and also field tolerance to phytophthora root rot.

## GLYPHOSATE TOLERANT SOYBEANS

### MATURITY GROUP IV

**GSG 4914** is a late group IV (RM=4.9) indeterminate variety that averages 31” in height with purple flowers, tawny pubescence and black hila seed that average 3,200 seeds per pound. It scores 1.8 for lodging on a scale of 1-5 with 1 being best, has field tolerance to phytophthora root rot, is resistant to soybean cyst nematode Races 1,2,3,5 & 14, root knot nematode & frogeye leaf spot and possesses a chloride excluder for salt tolerance.

Quality Assurance Class

Gemeinhardt Seeds, Inc.

Anniston, MO

(573) 649-3520

**KSC 460GT** is a mid group IV indeterminate variety (relative maturity 4.6) that averages 34” in height. It has white flowers, tawny pubescence, tan pods and black hila seed. KSC 460GT is moderately susceptible to soybean cyst nematode and is considered field tolerant to phytophthora root rot. It is resistant to stem canker & frogeye leaf spot and is moderately resistant to root knot nematode.

Quality Assurance Class

Kincaid Seed Company

Jasper, MO

(417) 394-3100

**KSC 470RR/STS** is a mid-late group IV variety (RM 4.7) with light tawny pubescence, tan pods and black hila seed. It is resistant to glyphosate and sulfonylurea herbicides.

Quality Assurance Class

Kincaid Seed Company

Jasper, MO

(417) 394-3100

**KSC 480GT/STS** is a mid-late group IV indeterminate variety (RM 4.8) with white flowers, tawny pubescence, tan pods and black hila seed that average ~ 3,000 seeds/lb. It averages 35” in height and is tolerant to glyphosate and sulfonylurea herbicides. KSC 480GT/STS has field tolerance to phytophthora root rot, is moderately resistant to races 2 & 14 of SCN, is highly tolerant to SDS and resistant to stem canker and frogeye leaf spot.

Quality Assurance Class

Kincaid Seed Company

Jasper, MO

(417) 394-3100

**MO4901D GT** is a short late group IV semi determinate variety (RM 4.9) that averages 33” in height. It has purple flowers, tawny pubescence, tan pods and black hila seed that average 3,180 seeds/lb. MO4901D GT has moderate resistance to SCN (soybean cyst nematode) races 1,2,3,5 & 14 and SDS (sudden death syndrome). It has field tolerance to phytophthora root rot, moderate resistance to root knot nematode and resistance to stem canker, frogeye leaf spot and reniform nematode while containing a chloride excluder for salt tolerance.

Foundation Class

Missouri Foundation Seeds                      Columbia, MO                      (573) 884-7333

## ENLIST® SOYBEANS

### MATURITY GROUP III

**FRONTIER 3F89E3** is a 3.8 maturity, medium-tall height variety with white flowers, gray pubescence, brown pods and buff hila seed. It has good emergence & standability and scores 6.0 for SDS tolerance, 8.5 for PRR tolerance (RPS1k gene), 8.5 for iron chlorosis, 1.0 for root knot nematode tolerance and 9.0 for both stem canker and frogeye leaf spot tolerance on a scale of 1-9 with 9 being best. Frontier 3F89E3 rates resistant to race 3 and moderately resistant to race 14 of SCN (PI 88.788) and susceptible to brown stem rot.

#### Quality Assurance Class

Frontier Seed	Concordia, MO	(660) 422-1177
---------------	---------------	----------------

**SS-20.37NE3** is a 3.7 maturity, medium+ height variety with purple flowers, gray pubescence, brown pods and imperfect black hila seed. It scores 8.0 for emergence, 7.5 for standability, 8.0 for SDS tolerance, 8.0 for stress tolerance and 8.0 for PRR tolerance on a scale of 1-9 with 9 being best. SS-20.37NE3 rates resistant to race 3 and moderately resistant to race 14 of SCN (PI 88.788).

### SPRING OATS

**GOLIATH** (1994 PVP – Title V Protected) is a late maturing, white hulled release from the South Dakota Experiment Station. It has excellent grain yield and good test weight.

#### Registered & Certified Class

Parsons Seed Cleaning	Albany, MO	(660) 726-3774
-----------------------	------------	----------------

**HAYDEN** (1994 PVP - Title V Protected) is a white-hulled variety with early maturity, heading about 4 days later than Shelby 427. It is 2” taller than Shelby 427 and 4” shorter than Goliath. Hayden has excellent yield potential, high test weight and is resistant to smut and barley yellow dwarf virus. It is moderately susceptible to crown rust and stem rust and has lodging resistance better than Goliath and similar to Shelby 427.

#### Registered Class

Parsons Seed Cleaning	Albany, MO	(660) 726-3774
-----------------------	------------	----------------

#### Certified Class

Kincaid Seed Company	Jasper, MO	(417) 394-3100
Parsons Seed Cleaning	Albany, MO	(660) 726-3774

**NATTY** (1994 PVP - Title V Protected) is a white-hulled variety with medium-late maturity, heading about 1 day later than Shelby 427. It is 1” taller than Shelby 427 with similar lodging resistance. Natty has good yield potential, high test weight and is resistant to smut and moderately resistant to barley yellow dwarf virus. It is moderately susceptible to crown rust and stem rust.

Registered & Certified Class

Green Valley Seed

Kahoka, MO

(660) 727-3341

**SABER** (1994 PVP – Title V Protected) is an early maturing variety with light yellow kernels similar to ‘Ogle’ and was derived from the cross of ‘Tack’ and ‘Spurs’. It is approximately 2 days earlier in maturity than ‘Jay’ with a heading date the same as ‘Don’ and is approximately 4cm taller than both ‘Jay’ and ‘Don’ and 4cm shorter than ‘Chaps’. Saber is tolerant to barley yellow dwarf virus, moderately resistant/moderately susceptible to crown rust and is susceptible to loose smut. Test weight of Saber is very good and has been approximately 1.4 lbs/bu higher than ‘Jay’ and 2.2 lbs/bu higher than ‘Chaps’.

Certified Class

El-Par Seeds

Versailles, MO

(573) 378-4540

## RICE

**CAFFEY** (1994 PVP Protected) is a semi dwarf, early maturing medium-grain variety that averages 36” in height. Its leaves, lemma and palea are glabrous. Caffey is moderately susceptible to rice sheath blight and bacterial panicle blight and is susceptible to straighthead disorder and blast.

Registered & Certified Class

Tanner Seed Company, LLC

Bernie, MO

(573) 276-2286

**CL151** (1994 PVP – Title V Protected) is a semi-dwarf long grain rice variety that can be used with the Clearfield rice production system. It is 8 cm shorter than CL161 and 10 cm taller than CL131. It has purple apiculus and the color fades as grains approach maturity. The lemma and palea are straw-colored and glabrous and the bran is light brown. CL151 is susceptible to sheath blight, and moderately susceptible to blast and bacterial panicle blight.

Certified Class

Horizon Ag, LLC

Memphis, TN

866-237-6167

**CLL16** (1994 PVPA Protection Applied) is an early maturing, long grain variety with standard height that can be used with the Clearfield rice production system. It has very strong straw indicating good lodging resistance. CLL16 has moderate resistance to blast, is resistant to narrow brown leaf spot and is moderately resistant to false smut.

Registered & Certified Class

Horizon Ag, LLC

Memphis, TN

866-237-6167

**CLL17** (1994 PVPA Protection Applied) is an early maturing, semi-dwarf, long grain variety that averages 39” in height and can be used with the Clearfield rice production system. It has excellent grain yield and good grain quality. CLL17 has resistance to blast and is moderately susceptible to panicle blight and straighthead.

Registered & Certified Class

Horizon Ag, LLC

Memphis, TN

866-237-6167

**DG263L** (1994 PVPA Protection Applied) is an early maturing, long grain, semi-dwarf variety that averages 36” in height. It has excellent yield potential combined with a good disease package and good straw strength. DG263L is tolerant to blast, has resistance to cercospora and has excellent milling attributes.

Foundation, Registered & Certified Class

Loveland Products, Inc.

Loveland, CO

901-850-6533

**DIAMOND** (1994 PVP – Title V Protected) is an early maturing, long grain variety that averages 104 cm in height and 85 days from emergence to 50% heading. Diamond is moderately susceptible to bacterial panicle blight susceptible to sheath blight, kernel smut, blast, kernel smut, and very susceptible to false smut.

Certified Class

Tanner Seed Company, LLC

Bernie, MO

(573) 276-2286

**JAZZMAN** (1994 PVP Protected) is a high-yielding, conventional height, Jasmine-type aromatic, long-grain rice with very good milling and excellent grain quality that averaged 40 inches in height in yield tests across Louisiana compared with 37 and 39 inches for Cypress and Dellrose, respectively. It is similar in maturity to Cypress but later than Dellrose with the average number of days from emergence to 50 percent heading is 87 for both Jazzman and Cypress and 85 for Dellrose. Jazzman is moderately susceptible to rice sheath blight, bacterial panicle blight and straighthead disorder, and moderately resistant to blast.

## PEANUTS

**297** (1994 PVP – Title V Protected) is an extra-large seeded runner-type peanut with high oleic oil chemistry developed by the University of Florida. Released in 2014, this variety has demonstrated very good resistance to white mold, good resistance to TSWV, but is susceptible to leaf spot. It has a prominent center stem with semi-prostate growth habit.

Registered & Certified Class

Delta Peanut, LLC

Jonesboro, AR

(806) 759-7674

**331** (1994 PVP – Title V Protected) is a large seeded, medium maturity runner-type peanut with high oleic oil chemistry. Yield potential is similar to Georgia-12Y. It is moderately resistant to white mold, leaf spot and TSWV. The seed size is similar to Georgia-06G. Growth habit is semi-erect with a prominent main stem at digging. Foliage is light green, and the fruiting habit is alternate.

Certified Class

Delta Peanut, LLC

Jonesboro, AR

(806) 759-7674

**GEORGIA-06G** (1994 PVP – Title V Protected) is a large-seeded, runner-type peanut variety that was released in 2006 by the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-06G has a high level of resistance to TSWV. Georgia-06G combines high TSWV resistance with medium maturity and excellent yield and high TSMK grade.

Registered & Certified Class

Delta Peanut, LLC

Jonesboro, AR

(806) 759-7674

**GEORGIA-09B** (1994 PVP – Title V Protected) is a high-yielding, high oleic, TSWV-resistant, medium-seeded, runner-type peanut variety that was released in 2009 by the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia. Georgia-09B has a high level of resistance to spotted wilt disease caused by TSWV. Georgia-09B also has the high oleic and low linoleic fatty acid ratio for improved oil quality and longer shelf-life of peanut and peanut products. Georgia-09B originated from the first backcross made with Georgia Green as the recurrent parent. It has an intermediate runner growth habit and medium maturity, similar to Georgia Green. Georgia-09B has a medium runner seed size as compared to the larger-seeded, high oleic, runner-type variety, Florida-07.

Certified Class

Delta Peanut, LLC

Jonesboro, AR
