FOREWORD

All producers listed in this directory have affirmed that seed planted on fields for which certification was requested was foundation, registered or certified. The history of all such seed has been checked through the records of the Missouri Crop Improvement Association and all fields examined prior to harvest by a competent inspector. Final certification requires seed to be conditioned and a certified tag or certificate to be attached to each bag, container or bulk storage unit. More detailed information describing an individual source may be obtained from the producer or the MCIA office.

Certification may be completed by the producer, or if desired, he may have the seed conditioned by an Approved Certified Seed Conditioner and stored to await final sampling and certification.

Seed from fields that have met the requirements for field inspection may be transferred in bulk (unconditioned form) only after formal approval is granted by the Missouri Crop Improvement Association. Please contact the MCIA office for the appropriate transfer forms. All Missouri certified seed must be conditioned by a MCIA approved conditioning facility.

2021 Officers and Staff Missouri Crop Improvement Association

President	Rennie Davis, Vandalia
Vice President	E. L. Reed, Chillicothe
Director	Thomas Lee, Columbia
Director	Lynn Andrews, Carthage
Director	Pam Rowland, Dudley
Director	Eddie Hoff, Boonville
Director	Kevin Mainord, East Prairie
Director	Bruce Strobel, Concordia
Director	Dan Weber, Marshall
Executive Director / Secretary-Treasurer.....	Richard Arnett, Columbia
Assistant Director	Mark Quisenberry, Columbia
Field Services Manager	Rick Hofen, Columbia
Seed Laboratory Manager	Marshal Reidlinger, Columbia
Laboratory Technician	Robin Crane, Columbia
Laboratory Technician	Cory Arnett, Columbia

Purpose of Seed Certification

The purpose shall be to maintain and make available seed and propagating material of varieties so grown and distributed as to insure genetic purity and identity. To accomplish this, the Missouri Crop Improvement Association has adopted a limited generation program of seed certification that encompasses four recognized classes of seed; Breeder, Foundation, Registered and Certified.

Breeder's seed is original seed of a variety developed by the originator which remains in his/her control. Foundation seed is the progeny of Breeder's seed. Registered seed is the progeny of Foundation seed. Certified seed may be the progeny of either Foundation or Registered seed. The limited generation system means that Certified seed should not be more than three generations removed from original Breeder's seed.

Certified seed may not be re-certified, except for varieties where Foundation seed is no longer maintained or in the event an emergency is declared stating there is inadequate Foundation or Registered seed supplies to plant the needed acreage of a variety.

Authority

The Missouri Crop Improvement Association is designated annually as the official seed certifying agency for the State of Missouri by the Director of the Missouri Agricultural Experiment Station as provided for in Section 266.095 of the Missouri Seed Law.

Eligibility Requirements

The Missouri Crop Improvement Association will accept as eligible for certification any variety which:

1. Is released by the Missouri Agricultural Experiment Station and meets all Federal Seed Act requirements
2. Is recommended by the National Crop Variety Review Board
3. Is approved by the Plant Variety Protection Office and meets all Federal Seed Act requirements
4. Has been accepted for certification by a member agency of AOSCA and meets all Federal Seed Act Requirements
5. Meets all Federal Seed Act requirements and is determined to be eligible by the MCIA Certification Committee

Production

All Missouri Certified Seed is produced under the guidelines established by the MCIA Board of Directors for the production of Certified seed and adheres to the quality standards as published in the Missouri Seed Certification handbook. Only qualified producers approved by the MCIA Board of Directors are eligible to produce Missouri Certified Seed.

Inspection

All seed sold as Certified must meet the published standards for both field inspection and laboratory testing. Each production field of Missouri Certified Seed will be inspected one or more times in the field prior to harvest by a competent, qualified inspector. Each seed lot of Missouri Certified Seed will be inspected in the laboratory after conditioning to determine that the seed meets the minimum varietal purity and mechanical (germination, pure seed, etc...) standards established for that crop.

Labeling

An official tag or label of the MCIA must be attached to each container of seed sold as Certified. If Certified seed is sold in bulk form, an official certificate from the MCIA must accompany the seed at the time of sale. Seed should not be accepted as Certified without an official label or certificate, regardless of the claims of the seller.

QUALITY ASSURANCE PROGRAM (QA)

The Quality Assurance (QA) program is a service offered to MCIA members that mirrors the official certification program for cultivars that have not been approved for production as certified seed or do not meet certification eligibility requirements. MCIA's QA program provides independent, unbiased, third-party field inspection and laboratory testing for cultivars that are not eligible to be produced within the normal certification process. Listing in this directory implies that the seed is eligible to be tagged with an official MCIA QA tag or label. Please refer to the label for the exact status of the seed. For additional information on the QA program, please contact the MCIA office.

Protected Varieties Produced in Missouri

The following list contains varieties applied for certification or quality assurance inspection in Missouri for which the owner has applied and/or received a certificate of Plant Variety Protection. In either case, no one may offer for sale, sexually multiply or use to produce a hybrid, seed of these varieties without the permission of the owner or applicant. Seed of varieties for which the originator has invoked U.S. Plant Variety Protection may be sold by variety name only.

This is not a complete listing of all protected varieties, only those varieties for which certification or quality assurance inspection by the Missouri Crop Improvement Association has been applied for. A complete listing of all protected varieties may be obtained by contacting:

SOFT RED WINTER WHEAT

AGRI MAXX 415 is an awned variety that averages 37” in height with medium maturity. It scores 10 for standability, 8 for double crop suitability, 8 for winter hardiness, 10 for test weight, 8 for septoria glume blotch resistance, 8 for leaf rust resistance, 9 for stripe rust resistance, 9 for head scab resistance, 8 for septoria leaf blotch resistance and 8 for powdery mildew resistance on a scale of 1-10 with 10 being excellent.

Quality Assurance Class

Andrews Farm & Seed

Carthage, MO

(417) 246-5510

AGRI MAXX 463 is an awnless variety with early maturity and medium short height. It scores 9 for double crop suitability, 10 for standability, 8 for winter hardiness, 7 for test weight, 8 for septoria glume blotch resistance, 8 for leaf rust resistance, 9 for stripe rust resistance, 10 for head scab resistance, 8 for septoria leaf blotch resistance and 8 for powdery mildew resistance on a scale of 1-10 with 10 being excellent.

Andrews Farm & Seed

Carthage, MO

(417) 246-5510

Weber Seeds

Marshall, MO

(660) 886-9998

AGRI MAXX 473 is an awned variety medium early maturity with medium height. It scores 9 for double crop suitability, 8 for winterhardiness, 9 for test weight and 9 for lodging. Agri Maxx 473 scores 10 for head scab resistance, 9 for leaf and stripe rust resistance and 9 for powdery mildew resistance on a scale of 1-10 with 10 being excellent.

Quality Assurance Class

Weber Seeds

Marshall, MO

(660) 886-9998

AGRI MAXX 475 is an awned variety with medium short height (84cm average), recurved/twisted flag leaf at boot stage, yellow-green plant color, yellow anthers and tan glumes at maturity. It has acceptable milling and baking qualities.

Quality Assurance Class

Weber Seeds

Marshall, MO

(660) 886-9998

AGRI MAXX 490 is an awned variety that averages 37” in height with very early maturity. It scores 8 for standability, 10 for double crop suitability, 8 for winter hardiness, 10 for test weight, 8 for septoria glume blotch resistance, 8 for leaf rust resistance, 6 for stripe rust resistance, 8 for head scab resistance, 8 for septoria leaf blotch resistance and 7 for powdery mildew resistance on a scale of 1-10 with 10 being excellent.

Quality Assurance Class

Weber Seeds

Marshall, MO

(660) 886-9998

AGRI MAXX 500 is an awnletted variety with medium-short height & ultra-early maturity that is well suited for double-cropping. It scores 5 for straw yield, 7 for test weight & lodging and 8 for winterhardiness. AgriMaxx 500 scores 7 for stripe rust & powdery mildew and 8 for leaf rust, Septoria leaf blotch, Septoria glume blotch & fusarium head blight (scab) on a scale of 1-10 with 10 being best.

Quality Assurance Class

Weber Seeds Marshall, MO (660) 886-9998

AGRI MAXX 503 is an awnletted variety with medium tall height. It has a medium early maturity, a dense head density, yellow anther color and the flag leaf at boot stage is erect and twisted.

Quality Assurance Class

Andrews Farm & Seed Carthage, MO (417) 246-5510
Weber Seeds Marshall, MO (660) 886-9998

AGRI MAXX 505 is an awned variety with medium-tall in height. It has a medium early maturity, head density is mid-dense, yellow anther color and the flag leaf at boot stage is erect and twisted.

Quality Assurance Class

Andrews Farm & Seed Carthage, MO (417) 246-5510

AGRI MAXX 513 is an awned (bearded) variety with medium height & medium-early maturity that is well suited for double-cropping. It scores 8 for winterhardiness, straw yield & standability and 10 for test weight. AgriMaxx 513 scores 8 for leaf rust, stem rust, Septoria leaf blotch, Septoria glume blotch & powdery mildew and 9 for stripe rust & fusarium head blight (scab) on a scale of 1-10 with 10 being best.

Quality Assurance Class

Andrews Farm & Seed Carthage, MO (417) 246-5510

AGRI MAXX EX 2009 is an awned (bearded) variety with medium height & early maturity. It scores 5 for straw yield and 8 for winterhardiness, test weight & standability. AgriMaxx EX 2009 scores 7 for powdery mildew, 8 for Septoria leaf blotch & Septoria glume blotch and 9 for leaf rust, stripe rust & fusarium head blight (scab) on a scale of 1-10 with 10 being best.

Quality Assurance Class

Weber Seeds Marshall, MO (660) 886-9998

BESS is a white chaffed, apically awnletted variety with an average height of 38-40 inches and good straw strength. Bess is a moderately early maturing variety averaging 1-2 days later than Ernie, 1-2 days earlier than Roane and 5 days earlier than Truman. It has good resistance against *Fusarium* head blight (scab) and was one of only a few lines tested with low ratings in all 7 categories of resistance measured in the US Northern Winter Wheat Fusarium Head Blight Nursery. Bess is moderately resistant to stripe rust but is considered susceptible to both leaf rust and stem rust. It has intermediate field reaction to *Septoria* leaf blotch and is moderately resistant to soil-borne mosaic virus and moderately susceptible to wheat spindle streak virus and barley yellow dwarf virus. Bess is susceptible to all races of Hessian fly.

Foundation Class

HILLIARD (1994 PVP Protected) is a broadly adapted variety with medium stature (34-38") and excellent straw strength. It is resistant to barley yellow dwarf virus and powdery mildew, moderately resistant to leaf rust, leaf blotch caused by *Septoria tritici* and *Stagnospora modorum* as well as glume blotch caused by *Septoria nodorum*. Hilliard is resistant to Hessian fly biotypes B, C and D but is susceptible to biotypes O and L.

Quality Assurance Class

Krause Seeds, Inc.	Concordia, MO	(660) 463-7333
--------------------	---------------	----------------

KINGRAZER is an awnletted, moderately tall variety with early maturity. It is moderately resistant to leaf rust, barley yellow dwarf virus, *Septoria tritici* and is moderately susceptible to soil borne mosaic virus, stripe rust and *Fusarium* head blight (scab). Kingrazer exhibits good winter hardiness, has good straw strength and good tillering capacity.

Quality Assurance Class

Andrews Farm & Seed	Carthage, MO	(417) 246-5510
---------------------	--------------	----------------

KSC 1171 is an awned variety with medium height. It has an early maturity, good straw strength and good test weight. KSC 1171 has excellent tolerance to stripe rust, leaf rust, mildew and septoria. It has average tolerance to fusarium head blight (head scab).

Quality Assurance Class

Kincaid Seed Company Jasper, MO (417) 394-3100

KSC 1180 is a smooth-head variety with medium-early maturity, average test weight and excellent standability that averages 34" in height. It scores average for fusarium head blight (scab) resistance and 1 for stripe rust, 2 for leaf rust and 2 for septoria on a scale of 1-9 with 1 being most resistant.

Quality Assurance Class

Kincaid Seed Company Jasper, MO (417) 394-3100

KSC 1181 is a smooth-head variety with medium maturity, average test weight and excellent standability that averages 32" in height. It scores average for fusarium head blight (scab) resistance and 1 for stripe rust, leaf rust and septoria on a scale of 1-9 with 1 being most resistant.

Quality Assurance Class

Kincaid Seed Company Jasper, MO (417) 394-3100

LIBERTY 5658 (Plant Variety Protection Pending) is a semi-dwarf, awned variety with medium maturity that averages 30-36" in height. It has moderate to high levels of resistance to powdery mildew, leaf rust, stripe rust, stem rust, leaf blotch, glume blotch barley yellow dwarf, wheat spindle streak and fusarium head blight (head scab). Liberty 5658 is susceptible to Hessian fly biotypes B,C,D,O & L.

Foundation Class

Missouri Foundation Seeds Columbia, MO (573) 884-7333

Registered & Certified Class

Kincaid Seed Company Jasper, MO (417) 394-3100

LCS 3334 is a smooth-head variety with medium maturity, above average test weight and good standability that averages 37" in height. It scores 0.5 for fusarium head blight (scab), 0.8 for stripe rust, 3.2 for leaf rust, 2.0 for powdery mildew, 1.5 for barley yellow dwarf, 1.0 for septoria glume blotch, 2.4 for septoria leaf blotch & 7.0 for soil borne mosaic virus on a scale of 1-9 with 1 being most resistant.

Quality Assurance Class

Lakeview Farms Middletown, MO (573) 549-2231

LVF 0938 is an awnletted variety with medium height. It has an ultra-early maturity and good standability. LVF 0938 is resistant to powdery mildew, leaf rust, glume blotch, and septoria tritici and has moderate resistance to stripe rust and soil-borne mosaic virus.

Quality Assurance Class

Lakeview Farms Middletown, MO (573) 549-2231

MOMENTUM 110 is a smooth head variety that averages 35” in height with early maturity, making it ideal for double-cropping. It has excellent standability, above average test weight and very good tolerance to fusarium head blight (scab). Momentum 110 scores 1 for leaf rust resistance, 1 for stripe rust resistance, and 4 for Septoria on a scale of 1-9 with 1 being excellent.

Parent Class

Thompson & Son Seed Treating	Appleton City, MO	(660) 679-1041

OAKES (1994 PVP Protected – Title V) is a medium height variety (same as Beretta) with mid-season maturity (2 days earlier than Beretta) that is adapted to most of the mid-south, delta and eastern soft red wheat areas. It is resistant/moderately resistant to prevalent field races of stripe rust and is moderately resistant/moderately susceptible to leaf rust races prevalent in the mid-south and southeastern U.S, wheat spindle streak virus, soil borne mosaic virus and *Septoria tritici* (leaf blotch). Oakes is moderately susceptible/susceptible to powdery mildew in the southeast and is susceptible to Hessian fly.

Certified Class

Stoddard County Seed & Feed	Dudley, MO	(573) 624-6666
-----------------------------	------------	----------------

OLIVER is a smooth head variety that averages 37” in height and matures 2 days earlier than Branson and 8 days earlier than Truman. It scores 2.2 for standability, 1.9 for winter hardiness, 1.0 for test weight, 2.0 for barley yellow dwarf virus resistance, 1.5 for glume blotch resistance, 1.0 for stripe rust resistance, 2.5 for leaf rust resistance, 1.0 for *Fusarium* head blight (scab) resistance, 3.0 for *Septoria tritici* resistance, 2.0 for powdery mildew resistance, 2.3 for wheat spindle streak virus resistance and 2.8 for soil borne mosaic virus resistance on a scale of 1-5 with 1 being excellent and 5 being poor.

Quality Assurance Class

Gremaud Ag & Resources	Perryville, MO	(573) 547-7214
------------------------	----------------	----------------

PIIONEER BRAND 26R10 (1994 PVP Protected) is an awned variety with adaptation to the soft red winter wheat growing regions of the southeastern and mid-southern U.S., approximately south of the Ohio river. It averages 122 days to heading (2 days later than 26R15) and averages 84 cm in height (5 cm shorter than 26R15). Pioneer Brand 26R10 has shown very good stripe rust resistance and exhibits good resistance to leaf rust, soil-borne mosaic virus and wheat spindle streak virus. It has shown slightly below average resistance to *Fusarium* head blight (scab) and has resistance to biotype L of Hessian fly from the H13 resistance gene.

Quality Assurance Class

Gemeinhardt Seeds	East Prairie, MO	(573) 649-3396
-------------------	------------------	----------------

ROANE (1994 PVP Protected – Title V) is a full season, high yielding, awnletted variety with exceptionally high test weight and resistance or tolerance to a broad spectrum of plant pathogens and insect pests. It is approximately 1” taller than Coker 9803 and 1” shorter than FFR 555W. Straw strength is similar to FFR 555W and superior to Jackson. Winter hardiness is similar to Madison and superior to Jackson. Roane has some resistance to barley yellow dwarf virus and is resistant to the prevalent races of leaf rust. It lacks any known genetic resistance to stem rust. Roane expresses an intermediate level of resistance to soil borne mosaic virus, wheat spindle streak virus and leaf/glume blotch. It possesses moderate tolerance to head scab and is resistant to biotypes B, C, E and GP of Hessian fly.

Foundation Class

Missouri Foundation Seeds	Columbia, MO	(573) 884-7333

Ken Tevis Seed	Hughesville, MO	(660) 460-0648

SY RICHIE (1994 PVP Protected – Title V) is an awnletted variety and is medium in height. It has a mid-season maturity, yellow anther color and flag leaf at boot stage is recurved and twisted. SY Richie has shown resistance to current races of powdery mildew, stripe rust and leaf rust and is considered susceptible to Hessian fly.

Registered/Certified Class

Kincaid Seed Company	Jasper, MO	(417) 394-3100
Stoddard County Seed & Feed	Dudley, MO	(573) 624-6666

SY VIPER (1994 PVP Protected – Title V) is a medium maturity variety that averages 39” in height found to be adapted to southeastern MO, eastern AR, western TN and KY, the ‘Delta’ region of MS, north LA, eastern NC and northeastern SC. It has shown moderate resistance to current races of powdery mildew and moderate susceptibility to leaf rust in the area of adaptation and is susceptible to several current races of powdery mildew.

TRUMAN (1994 PVP Protected – Title V) is an apically awnletted variety with moderately tall plant height and full season maturity (comparable to Cardinal and 3-4 days later than Roane). It has good winter hardiness and is moderately tolerant of acid soils. Truman has a high level of broad-based resistance to *Fusarium* head blight (scab). It is resistant to stripe rust and has above average resistance to *Septoria* leaf blotch. Truman is moderately resistant to soil borne mosaic virus and moderately susceptible to barley yellow dwarf virus. It is susceptible to leaf rust, stem rust and all biotypes of Hessian fly.

103rd Annual Meeting
of the
Missouri Crop Improvement Association

To Be Held At

Missouri Crop Improvement Association
3211 Lemone Industrial Blvd
Columbia, MO 65201

August 9, 2021
Columbia, MO

Annual Membership Meeting to begin at 12:00 p.m.

Members are invited to attend the annual meeting but should be aware that due to lack of attendance in previous years, there are no presentations scheduled and no luncheon is planned. It is expected that the annual meeting will be brief in nature and the main item for consideration will be election of the Board of Directors for the coming year. In order to make sure a quorum of members are represented at the annual meeting, either in person or by proxy, proxy designation forms will be sent to all active and affiliate members approximately one month prior to the meeting.

Please contact the MCIA office or any member of the Board of Directors if you have any questions or issues you would like to be addressed at the 2021 meeting.
