## FOREWORD

All producers listed in this directory have affirmed that seed planted on fields for which certification was requested was foundation, registered or certified. The history of all such seed has been checked through the records of the Missouri Crop Improvement Association and all fields examined prior to harvest by a competent inspector. Final certification requires seed to be conditioned and a certified tag or certificate to be attached to each bag, container or bulk storage unit. More detailed information describing an individual source may be obtained from the producer or the MCIA office.

Certification may be completed by the producer, or if desired, he may have the seed cleaned by an Approved Certified Seed Conditioner and stored to await final sampling and certification.

Seed from fields that have met the requirements for field inspection may be transferred in bulk (unconditioned form) only after formal approval is granted by the Missouri Crop Improvement Association. Please contact the MCIA office for the appropriate transfer forms. All Missouri certified seed must be conditioned by a MCIA approved conditioning facility.

### 2022 Officers and Staff Missouri Crop Improvement Association

President	Rennie Davis	Vandalia
Vice President	E. L. Reed	Chillicothe
Director	Bruce Strobel	Concordia
Director	Vacant	
Director	Lynn Andrews	Carthage
Director	Dan Weber	Marshall
Director	Kevin Mainord	East Prairie
Director	Pam Rowland	Dudley
Director	Eddie Hoff	Boonville
Executive Director	Richard Arnett	Columbia
Assistant Director/Field Services Manager	Rick Hofen	Columbia
Laboratory Services Manager	Marshal Reidlinger	Columbia
Laboratory Seed Analyst	Paul Springer	Columbia
Laboratory Assistant	Robin Crane	Columbia
Laboratory Assistant	Cory Arnett	Columbia

### Purpose of Seed Certification

The purpose shall be to maintain and make available seed and propagating material of varieties so grown and distributed as to insure genetic purity and identity. To accomplish this, the Missouri Crop Improvement Association has adopted a limited generation program of seed certification that encompasses four recognized classes of seed; Breeder, Foundation, Registered and Certified.

Breeder's seed is original seed of a variety developed by the originator, which remains in his/her control. Foundation seed is the progeny of Breeder's seed. Registered seed is the progeny of Foundation seed. Certified seed may be the progeny of either Foundation or Registered seed. The limited generation system means that Certified seed should not be more than three generations removed from original Breeder's seed unless it is produced under re-certification provisions.

Certified seed may not be re-certified, except for varieties where Foundation seed is no longer maintained or in the event an emergency is declared stating there is inadequate Foundation or Registered seed supplies to plant the needed Certified acreage of a variety.

## **Authority**

The Missouri Crop Improvement Association is designated annually as the official seed certifying agency for the State of Missouri by the Director of the Missouri Agricultural Experiment Station as provided for in Section 266.095 of the Missouri Seed Law.

## **Eligibility Requirements**

The Missouri Crop Improvement Association will accept as eligible for certification any variety which:

1. Is released by the Missouri Agricultural Experiment Station
2. Is recommended by the National Crop Variety Review Board
3. Is approved by the Plant Variety Protection Office
4. Has been accepted for certification by any member agency of AOSCA
5. Is determined to be eligible by the MCIA Certification Committee

## **Production**

All Missouri Certified Seed is produced under the guidelines established by the MCIA Board of Directors for the production of Certified seed and adheres to the quality standards as published in the Missouri Seed Certification handbook. Only qualified Missouri producers and seedsmen approved by the MCIA Board of Directors are eligible to produce Missouri Certified Seed.

## **Inspection**

All seed sold as Certified must meet the published standards for both field inspection and laboratory testing. Each production field of Missouri Certified Seed will be inspected one or more times in the field prior to harvest by a competent, qualified inspector. Each seed lot of Missouri Certified Seed will be inspected in the laboratory after conditioning to determine that the seed meets the minimum varietal and mechanical (germination, pure seed, etc...) purity standards established for that crop.

## **Labeling**

An official tag or label of the MCIA must be attached to each container of seed sold as Certified. If Certified seed is sold in bulk form, an official certificate from the MCIA must accompany the seed at the time of sale. Seed should not be accepted as Certified without an official label or certificate, regardless of the claims of the seller.

The purpose of this booklet is to provide producers and seedsmen with a convenient reference of the sources of Certified seed. For additional copies or information not provided in this booklet, please contact:

## Protected Varieties Certified in Missouri

The following list contains varieties applied for certification in Missouri for which the owner has applied and/or received a certificate of Plant Variety Protection. In either case, no one may offer for sale, sexually multiply or use to produce a hybrid, seed of these varieties without the permission of the owner or applicant. Seed of varieties for which the originator has invoked U.S. Plant Variety Protection may be sold by variety name only.

This is not a complete listing of all protected varieties, only those varieties for which certification by the Missouri Crop Improvement Association has been applied for. A complete listing of all protected varieties may be obtained by contacting:

## Quality Assurance Program

MCIA's Quality Assurance® (QA) program is offered to seed producers desiring unbiased, third-party inspection and testing program quality control services for branded seed products that do not meet eligibility requirements for certification. The QA program mirrors the traditional certification program in all aspects of field inspection and laboratory testing. Please contact the MCIA office for more details on the QA program or any seed products carrying MCIA's QA label.

## Source Identified Program

MCIA's Source Identified program is available for indigenous or non-indigenous trees, shrubs, vines and herbaceous plants such as grasses and forbs, including wildflowers. This program assures the proper identity and purity of native and naturalized plants that are needed to re-vegetate, restore, improve or stabilize wildland plant communities. The standards are designed to:

1. Verify the genus, species and ecotype characteristics of the original source plants.
2. Track the genetic status and properly label these germplasm accessions whether marketed as original wildland collections or as a product of field seed increase through one or more generations.

## Alphabetical Listing of Producers

**MPV 4238N** is an early to mid-group IV indeterminate variety (RM 4.3) that averages 39” in height with white flowers, tawny pubescence and black hila seed. MPV 4238N is rated resistant to races 3 and 14 of soybean cyst nematode (SCN) and moderately susceptible to sudden death syndrome (SDS). MPV 4238N has demonstrated significant yield advantages over the variety Maverick in both infested and non-infested SCN environments in replicated performance testing.

**MATURITY GROUP V**

**DUDLEY** is an early group V determinate variety (RM 5.1) that averages 30” in height. It has white flowers, tan pods, tawny pubescence and black hila seed that averages approximately 3,200 seeds per pound. Dudley is moderately resistant to races 1,2,3,5 & 14 of soybean cyst nematode (SCN), sudden death syndrome (SDS), stem canker, root knot nematode and reniform nematode, while exhibiting resistance to frogeye leaf spot. It rates 1.2 for emergence and 2.3 for lodging on a scale of 1-5 with 1 being best.

Quality Assurance Class

Stoddard County Seed Service

Dudley, MO

(573) 524-6666

**JAKE** is a mid-group V determinate variety (RM 5.4) that averages 32” in height. It has purple flowers, tawny pubescence, tan pods and black hila seed. Jake has shown resistance to races 1, 2, 3, 5 and 14 of soybean cyst nematode, is resistant to reniform nematode and has shown moderate resistance to root knot nematode. It is moderately resistant to sudden death syndrome (SDS) and stem canker and is susceptible to phytophthora root rot. Yields of Jake have equaled Anand on loam soils, but have averaged approximately 7 bu/ac more on clay and sand in Missouri tests. Jake has been superior in yield compared to Anand in Mississippi, Arkansas and Tennessee State AES trials.

(573) 624-6666

**MOMENTUM 52C06** is an early group V determinate variety (RM 5.2) that is considered short in height (30”). It has purple flowers, tawny pubescence, tan pods and black hila seed averaging approximately 2,900 seeds/lb. It is resistant to SCN races 1,2,3,5 & 14, and moderately resistant to SDS. In addition to broad SCN resistance, Momentum 52C06 is resistant to root knot nematode, reniform nematode, frogeye leaf spot and stem canker. It has a chloride excluder that provides salt tolerance and also field tolerance to phytophthora root rot.

## LIBERTY LINK® GT27™ SOYBEANS

### MATURITY GROUP III

**FRONTIER 3F58GTLL** is a 3.5 maturity, medium height variety with purple flowers, light tawny pubescence, brown pods and black hila seed that average approximately 2,600 seeds per pound. It has a good SCN package, contains the Rps1c gene which conveys good phytophthora root rot tolerance and has strong stem canker tolerance.

Quality Assurance Class

Frontier Seed

Concordia, MO

(660) 422-1177

### MATURITY GROUP IV

**SS-19L.44GTL** is a new 4.4 maturity, medium-tall glufosinate tolerant variety with white flowers, light tawny pubescence, brown pods and brown hila seed. It ranks 8.0 for SDS resistance, 7.0 for emergence and standability, 8.0 for phytophthora root rot tolerance, 9.0 for stem canker resistance, 6.5 for frogeye leaf spot resistance and 1.0 for root knot nematode resistance on a scale of 1-10 with 10 being best.

(573) 378-4540

### SPRING OATS

**GOLIATH** (1994 PVP – Title V Protected) is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2012. The line was tested as SD090552 and was developed from the two parent population IL99-1338/SD97575-38-154. Varieties in the pedigree include Rise, Settler and Troy. Goliath has late maturity, heading 1.7 days later than Stallion. Goliath is 4.3 inches taller than Stallion. Goliath has excellent grain yield and forage yield potential, as well as good test weight.

Certified Class

Parsons Seed Cleaning

Albany, MO

(660) 726-3774

**HAYDEN** (1994 PVP - Title V Protected) is a white-hulled variety with early maturity, heading about 4 days later than Shelby 427. It is 2” taller than Shelby 427 and 4” shorter than Goliath. Hayden has excellent yield potential, high test weight and is resistant to smut and barley yellow dwarf virus. It is moderately susceptible to crown rust and stem rust and has lodging resistance better than Goliath and similar to Shelby 427.

Certified Class

Parsons Seed Cleaning

Albany, MO

(660) 726-3774

**NATTY** (1994 PVP - Title V Protected) is a white-hulled variety with medium-late maturity, heading about 1 day later than Shelby 427. It is 1” taller than Shelby 427 with similar lodging resistance. Natty has good yield potential, high test weight and is resistant to smut and moderately resistant to barley yellow dwarf virus. It is moderately susceptible to crown rust and stem rust.

**REINS** (1994 PVP - Title V Protected) is an early-maturing cultivar adapted to production in Illinois and surrounding states. It was developed by the University of Illinois Agricultural Experiment Station and was released in 2015. Reins is moderately resistant to moderately susceptible to crown rust depending on races present at a location. It has plump, tan kernels. Reins was selected and released based on high yield potential, excellent test weight, short plant stature, tolerance to Barley yellow dwarf virus, lodging resistance, and resistance to loose smut.

**RUSHMORE** (1994 PVP - Title V Protection Applied For) is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2019. The line was tested as SD140515 with the pedigree of SD80015/SD0070110/SD060130. Rushmore is a medium-late maturing line, heading about 1 day earlier than Hayden. Rushmore is similar in height to Hayden with better lodging resistance. Rushmore has highyield potential and good test weight. Rushmore is resistant to moderately resistant to crown rust. The variety is moderately resistant to BYDV and smut.

Kahoka, MO

(660) 727-3341

**SABER** (1994 PVP – Title V Protected) is an early maturing variety with light yellow kernels similar to ‘Ogle’ and was derived from the cross of ‘Tack’ and ‘Spurs’. It is approximately 2 days earlier in maturity than ‘Jay’ with a heading date the same as ‘Don’ and is approximately 4cm taller than both ‘Jay’ and ‘Don’ and 4cm shorter than ‘Chaps’. Saber is tolerant to barley yellow dwarf virus, moderately resistant/moderately susceptible to crown rust and is susceptible to loose smut. Test weight of Saber is very good and has been approximately 1.4 lbs/bu higher than ‘Jay’ and 2.2 lbs/bu higher than ‘Chaps’.

## RICE

**CAFFEY** (1994 PVP Protected) is a semi dwarf, early maturing medium-grain variety that averages 36” in height. Its leaves, lemma and palea are glabrous. Caffey is moderately susceptible to rice sheath blight and bacterial panicle blight and is susceptible to straighthead disorder and blast.

Certified Class

Tanner Seed Company, LLC                      Bernie, MO                      (573) 276-2286

**CL111** (1994 PVP – Title V Protected) is a very early maturing, short stature long grain variety with moderate resistance to lodging for use in the Clearfield rice production system. It is approximately the same height as CL151 & CL161 and is 13 cm taller than CL131. CL111 is susceptible to sheath blight & blast and moderately susceptible to straighthead disorder.

Registered & Certified Class

Horizon Ag, LLC                      Memphis, TN                      866-237-6167

**CLL16** (1994 PVPA Protection Applied) is an early maturing, long grain variety with standard height that can be used with the Clearfield rice production system. It has very strong straw indicating good lodging resistance. CLL16 has moderate resistance to blast, is resistant to narrow brown leaf spot and is moderately resistant to false smut.

Registered & Certified Class

Horizon Ag, LLC                      Memphis, TN                      866-237-6167

**CLM04** (1994 PVPA Protected) is a high yielding, early maturing, short statured Clearfield® medium grain line that appears to have good milling and grain quality and good lodging and blast resistance when compared with CL272, Jupiter and Titan. It measures 106 cm in height (slightly taller than CL272’s 102 cm) and has similar maturity to CL272 and Jupiter. CLM04 is moderately susceptible to leaf blast, however, it does possess both blast resistant genes (*Pi-z* and *Pi-ks*). It is susceptible to sheath blight, bacterial panicle blight, kernel smut and false smut.

Registered & Certified Class

Horizon Ag, LLC                      Memphis, TN                      866-237-6167

**DG263L** (1994 PVPA Protection Applied) is an early maturing, long grain, semi-dwarf variety that averages 36” in height. It has excellent yield potential combined with a good disease package and good straw strength. DG263L is tolerant to blast, has resistance to cercospora and has excellent milling attributes.

Foundation, Registered & Certified Class

Loveland Products, Inc.                      Loveland, CO                      901-850-6533

**JAZZMAN** (1994 PVP Protected) is a high-yielding, conventional height, Jasmine-type aromatic, long-grain rice with very good milling and excellent grain quality that averaged 40 inches in height in yield tests across Louisiana compared with 37 and 39 inches for Cypress and Dellrose, respectively. It is similar in maturity to Cypress but later than Dellrose with the average number of days from emergence to 50 percent heading is 87 for both Jazzman and Cypress and 85 for Dellrose. Jazzman is moderately susceptible to rice sheath blight, bacterial panicle blight and straighthead disorder, and moderately resistant to blast.

Tanner Seed Company, LLC

Bernie, MO

(573) 276-2286

**PVL03** is a long-grain Provisia rice line with improved grain yield, grain quality and resistance to blast. It averages 101 cm in height (2 cm taller than PVL01 and CL153 & 3 cm taller than Cheniere) and 2 days earlier than CL153 and Cheniere. PVL03 contains the blast resistance gene *Pita*, which confers resistance to all documented races of blast in Louisiana, and the *Cersospora* resistance gene *CRSP2.1* which confers broad-spectrum resistance. It is susceptible the sheath blight and bacterial panicle blight.

## PEANUTS

**297** (1994 PVP – Title V Protected) is an extra-large seeded runner-type peanut with high oleic oil chemistry developed by the University of Florida. Released in 2014, this variety has demonstrated very good resistance to white mold, good resistance to TSWV, but is susceptible to leaf spot. It has a prominent center stem with semi-prostate growth habit.

Delta Peanut, LLC

Jonesboro, AR

(806) 759-7674

**GEORGIA-06G** (1994 PVP – Title V Protected) is a large-seeded, runner-type peanut variety that was released in 2006 by the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-06G has a high level of resistance to TSWV. Georgia-06G combines high TSWV resistance with medium maturity and excellent yield and high TSMK grade.

Registered & Certified Class

Delta Peanut, LLC

Jonesboro, AR

(806) 759-7674

**GEORGIA-09B** (1994 PVP – Title V Protected) is a high-yielding, high oleic, TSWV-resistant, medium-seeded, runner-type peanut variety that was released in 2009 by the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia. Georgia-09B has a high level of resistance to spotted wilt disease caused by TSWV. Georgia-09B also has the high oleic and low linoleic fatty acid ratio for improved oil quality and longer shelf-life of peanut and peanut products. Georgia-09B originated from the first backcross made with Georgia Green as the recurrent parent. It has an intermediate runner growth habit and medium maturity, similar to Georgia Green. Georgia-09B has a medium runner seed size as compared to the larger-seeded, high oleic, runner-type variety, Florida-07.
