FOREWORD

All producers listed in this directory have affirmed that seed planted on fields for which certification was requested was foundation, registered or certified. The history of all such seed has been checked through the records of the Missouri Crop Improvement Association and all fields examined prior to harvest by a competent inspector. Final certification requires seed to be conditioned and a certified tag or certificate to be attached to each bag, container or bulk storage unit. More detailed information describing an individual source may be obtained from the producer or the MCIA office.

Certification may be completed by the producer, or if desired, he may have the seed cleaned by an Approved Certified Seed Conditioner and stored to await final sampling and certification.

Seed from fields that have met the requirements for field inspection may be transferred in bulk (unconditioned form) only after formal approval is granted by the Missouri Crop Improvement Association. Please contact the MCIA office for the appropriate transfer forms. All Missouri certified seed must be conditioned by a MCIA approved conditioning facility.

2024 Officers and Staff Missouri Crop Improvement Association

President	Rennie Davis	Vandalia
Vice President	E. L. Reed	Chillicothe
Director	Bruce Strobel	Concordia
Director	Hadlee Swope	Columbia
Director	Lynn Andrews	Carthage
Director	Dan Weber	Marshall
Director	Kevin Mainord	East Prairie
Director	Pam Rowland	Dudley
Director	Eddie Hoff	Boonville
Executive Director	Richard Arnett	Columbia
Assistant Director/Field Services Manager	Ryan Barnes	Columbia
Laboratory Services Manager	Marshal Reidlinger	Columbia
Laboratory Seed Analyst	Paul Springer	Columbia
Laboratory Assistant	Robin Crane	Columbia
Laboratory Assistant	Cory Arnett	Columbia

Purpose of Seed Certification

The purpose shall be to maintain and make available seed and propagating material of varieties so grown and distributed as to insure genetic purity and identity. To accomplish this, the Missouri Crop Improvement Association has adopted a limited generation program of seed certification that encompasses four recognized classes of seed; Breeder, Foundation, Registered and Certified.

Breeder's seed is original seed of a variety developed by the originator, which remains in his/her control. Foundation seed is the progeny of Breeder's seed. Registered seed is the progeny of Foundation seed. Certified seed may be the progeny of either Foundation or Registered seed. The limited generation system means that Certified seed should not be more than three generations removed from original Breeder's seed unless it is produced under re-certification provisions.

Certified seed may not be re-certified, except for varieties where Foundation seed is no longer maintained or in the event an emergency is declared stating there is inadequate Foundation or Registered seed supplies to plant the needed Certified acreage of a variety.

Authority

The Missouri Crop Improvement Association is designated annually as the official seed certifying agency for the State of Missouri by the Director of the Missouri Agricultural Experiment Station as provided for in Section 266.095 of the Missouri Seed Law.

Eligibility Requirements

The Missouri Crop Improvement Association will accept as eligible for certification any variety which:

1. Is released by the Missouri Agricultural Experiment Station
2. Is recommended by the National Crop Variety Review Board
3. Is approved by the Plant Variety Protection Office
4. Has been accepted for certification by any member agency of AOSCA
5. Is determined to be eligible by the MCIA Certification Committee

Production

All Missouri Certified Seed is produced under the guidelines established by the MCIA Board of Directors for the production of Certified seed and adheres to the quality standards as published in the Missouri Seed Certification handbook. Only qualified Missouri producers and seedsmen approved by the MCIA Board of Directors are eligible to produce Missouri Certified Seed.

Inspection

All seed sold as Certified must meet the published standards for both field inspection and laboratory testing. Each production field of Missouri Certified Seed will be inspected one or more times in the field prior to harvest by a competent, qualified inspector. Each seed lot of Missouri Certified Seed will be inspected in the laboratory after conditioning to determine that the seed meets the minimum varietal and mechanical (germination, pure seed, etc...) purity standards established for that crop.

Labeling

An official tag or label of the MCIA must be attached to each container of seed sold as Certified. If Certified seed is sold in bulk form, an official certificate from the MCIA must accompany the seed at the time of sale. Seed should not be accepted as Certified without an official label or certificate, regardless of the claims of the seller.

The purpose of this booklet is to provide producers and seedsmen with a convenient reference of the sources of Certified seed. For additional copies or information not provided in this booklet, please contact:

Protected Varieties Certified in Missouri

The following list contains varieties applied for certification in Missouri for which the owner has applied and/or received a certificate of Plant Variety Protection. In either case, no one may offer for sale, sexually multiply or use to produce a hybrid, seed of these varieties without the permission of the owner or applicant. Seed of varieties for which the originator has invoked U.S. Plant Variety Protection may be sold by variety name only.

This is not a complete listing of all protected varieties, only those varieties for which certification by the Missouri Crop Improvement Association has been applied for or is anticipated. A complete listing of all protected varieties may be obtained by contacting:

Quality Assurance Program

MCIA's Quality Assurance® (QA) program is offered to seed producers desiring unbiased, third-party inspection and testing program quality control services for branded seed products that do not meet eligibility requirements for certification. The QA program mirrors the traditional certification program in all aspects of field inspection and laboratory testing. Please contact the MCIA office for more details on the QA program or any seed products carrying MCIA's QA label.

Source Identified Program

MCIA's Source Identified program is available for indigenous or non-indigenous trees, shrubs, vines and herbaceous plants such as grasses and forbs, including wildflowers. This program assures the proper identity and purity of native and naturalized plants that are needed to re-vegetate, restore, improve or stabilize wildland plant communities. The standards are designed to:

1. Verify the genus, species and ecotype characteristics of the original source plants.
2. Track the genetic status and properly label these germplasm accessions whether marketed as original wildland collections or as a product of field seed increase through one or more generations.

MATURITY GROUP II

LVF 2849 is a 2.8 relative maturity variety with gray pubescence, tan pods and buff hila seed. Please contact the producer listed below for additional agronomic and performance data.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

MATURITY GROUP III

LVF 3039 is a 3.0 relative maturity variety with light tawny pubescence, brown pods and brown hila seed. Please contact the producer listed below for additional agronomic and performance data.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

LVF 3332B is a 3.3 relative maturity variety with gray pubescence, tan pods and buff hila seed. Please contact the producer listed below for additional agronomic and performance data.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

LVF 3430 is a 3.4 relative maturity variety with gray pubescence, brown pods and buff hila seed. Please contact the producer listed below for additional agronomic and performance data.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

LVF 3530 is a 3.5 relative maturity variety with light tawny pubescence, brown pods and black hila seed. Please contact the producer listed below for additional agronomic and performance data.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

LVF 3641 is a 3.6 relative maturity variety with gray pubescence, tan pods and buff (yellow) hila seed. Please contact the producer listed below for additional agronomic and performance data.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

RVS 3905 is a late group III indeterminate variety (RM 3.9) that averages 35” in height. It has purple flowers, grey pubescence, brown pods and imperfect black hila seed. RVS 3905 is listed as having field tolerance to phytophthora root rot, resistance to races 3 and 14 of SCN and is moderately susceptible to SDS, stem canker & frog-eye leaf spot.

Quality Assurance Class

River Valley Ag Exchange

Marshall, MO

(660) 886-4394

SA17-8882HO is a 4.1 maturity conventional, high oleic variety that averages 31” in height, has purple flowers, tawny pubescence, brown pods and black hila seed that average 2,900 seeds/lb. It has race 3 & 14 SCN resistance, field tolerance to phytophthora root rot and is moderately susceptible to SDS, stem canker and frog-eye leaf spot.

Quality Assurance Class

Callaway Seed, LLC

Auxvasse, MO

(573) 387-4827

SA18-268PR is a 3.9 maturity conventional, high oleic variety that averages 29” in height, has white flowers, light tawny pubescence, tan pods and brown hila seed that average 3,200 seeds/lb. It has race 3 & 14 SCN and stem canker resistance, field tolerance to phytophthora root rot and is moderately susceptible to SDS and frog-eye leaf spot.

Quality Assurance Class

Callaway Seed, LLC

Auxvasse, MO

(573) 387-4827

WILLIAMS 82 is a late group III indeterminate variety (RM 3.9) that averages 40” in height. It has white flowers, brown pubescence, tan pods and yellow seed with shiny luster and black hila. Williams 82 is resistant to bacterial pustule and Races 1-9, 10,13,14 and 15 of phytophthora root rot

Foundation Class

Missouri Foundation Seeds

Columbia, MO

(573) 884-7333

MATURITY GROUP IV

LVF 4331 please contact the producer listed below for additional agronomic and performance information.

Quality Assurance Class

Lakeview Farms

Middletown, MO

(573) 549-2231

RVS 4104 is an early group IV indeterminate variety (RM 4.1) that averages 37" in height. It has white flowers, grey pubescence, brown pods and buff hila seed. RVS 4104 is listed as having resistance to phytophthora root rot, SCN races 3 and 14, SDS, stem canker and charcoal rot. It is susceptible to frogeye leaf spot, root-knot nematode and reniform nematode. RVS 4104 has the chloride includer for salt tolerance and has demonstrated tolerance to metribuzin.

Quality Assurance Class

River Valley Ag Exchange

Marshall, MO

(660) 886-4394

RVS 4734 is a mid to late group IV indeterminate variety (RM 4.7) that averages 32" in height with purple flowers, tawny pubescence, tan pods and black hila seed. RVS 4734 is listed as having resistance or moderate resistance to phytophthora root rot, SCN race 2, 3 & 5, stem canker, frogeye leaf spot, SDS & charcoal rot and has the chloride includer for salt tolerance.

Quality Assurance Class

River Valley Ag Exchange

Marshall, MO

(660) 886-4394

MATURITY GROUP V

JAKE is a mid-group V determinate variety (RM 5.4) that averages 32" in height. It has purple flowers, tawny pubescence, tan pods and black hila seed. Jake has shown resistance to races 1, 2, 3, 5 and 14 of soybean cyst nematode, is resistant to reniform nematode and has shown moderate resistance to root knot nematode. It is moderately resistant to sudden death syndrome (SDS) and stem canker and is susceptible to phytophthora root rot. Yields of Jake have equaled Anand on loam soils, but have averaged approximately 7 bu/ac more on clay and sand in Missouri tests. Jake has been superior in yield compared to Anand in Mississippi, Arkansas and Tennessee State AES trials.

Foundation Class

Missouri Foundation Seeds

Columbia, MO

(573) 884-7333

VIRTUE 5422S is a mid-group V variety (RM 5.4) that has purple flowers, gray pubescence, tan pods and black hila seed.

SPRING OATS

RUSHMORE (1994 PVP - Title V Protection Applied For) is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2019. The line was tested as SD140515 with the pedigree of SD80015/SD0070110/SD060130. Rushmore is a medium-late maturing line, heading about 1 day earlier than Hayden. Rushmore is similar in height to Hayden with better lodging resistance. Rushmore has high yield potential and good test weight. Rushmore is resistant to moderately resistant to crown rust. The variety is moderately resistant to BYDV and smut.

Certified Class

Green Valley Seed	Kahoka, MO	(660) 727-3341
Parsons Seed Cleaning	Albany, MO	(660) 726-3774

SABER (1994 PVP – Title V Protected) is an early maturing variety with light yellow kernels similar to ‘Ogle’ and was derived from the cross of ‘Tack’ and ‘Spurs’. It is approximately 2 days earlier in maturity than ‘Jay’ with a heading date the same as ‘Don’ and is approximately 4cm taller than both ‘Jay’ and ‘Don’ and 4cm shorter than ‘Chaps’. Saber is tolerant to barley yellow dwarf virus, moderately resistant/moderately susceptible to crown rust and is susceptible to loose smut. Test weight of Saber is very good and has been approximately 1.4 lbs/bu higher than ‘Jay’ and 2.2 lbs/bu higher than ‘Chaps’.

Certified Class

RICE

CLL18 (1994 PVPA Protection Applied For) is a very high yielding, short season, long-grain Clearfield® rice cultivar with good straw strength, a maturity similar to CLL15 and a plant height of 37 inches similar to Diamond. It has a very good disease package better than any other of the other Clearfield lines being moderately resistant to rice blast, sheath blight, and bacterial panicle blight. CLL18 has typical long-grain cooking quality with a seed size similar to Diamond and CLL16.

Foundation, Registered & Certified Class

Horizon Ag, LLC

Memphis, TN

866-237-6167

CLL19 (1994 PVPA Protection Anticipated) is a long-grain Clearfield® rice cultivar with early maturity, excellent grain yield and good milling scores. It is slightly earlier and slightly shorter than CLL16 & CLL17. good straw strength, a maturity similar to CLL15 and a plant height of 37 inches similar to Diamond. CLL19 contains the last resistance gene Pita which confers broad-spectrum resistance, has moderate resistance to false smut, is moderately susceptible to Narrow leaf brown spot & panicle blight and is susceptible to sheath blight.

Foundation, Registered & Class

Horizon Ag, LLC

Memphis, TN

866-237-6167

DG245L (1994 PVPA Protection Applied For) is semi dwarf, early maturing long grain variety that averages 84 days to 50% heading and averages 36” in height at maturity. It has excellent yield potential combined with excellent milling attributes, good grain quality and a good disease package for the U.S. market.

Foundation, Registered & Class

Loveland Products, Inc.

Greeley, CO

901-850-6533

DG263L (1994 PVPA Protection Applied For) is an early maturing, long grain, semi-dwarf variety that averages 36” in height. It has excellent yield potential combined with a good disease package and good straw strength. DG263L is tolerant to blast, has resistance to cercospora and has excellent milling attributes.

Foundation, Registered & Certified Class

Loveland Products, Inc.

Greeley, CO

901-850-6533

DG353M (1994 PVPA Protection Anticipated) is a semi-dwarf, early maturing, medium-grain cultivar with high yield potential and a large grain size, which is desired by the medium- grain processing industry. It is considered moderately resistant to lodging, moderately susceptible to sheath blight, moderately susceptible to blast disease and is susceptible to bacterial panicle blight. DG353M should provide rice growers interested in producing medium- grain rice with a high-yielding, high-quality variety that is broadly adapted to southern U.S. growing conditions.

JAZZMAN (1994 PVP Protected) is a high-yielding, conventional height, Jasmine-type aromatic, long-grain rice with very good milling and excellent grain quality that averaged 40 inches in height in yield tests across Louisiana compared with 37 and 39 inches for Cypress and Dellrose, respectively. It is similar in maturity to Cypress but later than Dellrose with the average number of days from emergence to 50 percent heading is 87 for both Jazzman and Cypress and 85 for Dellrose. Jazzman is moderately susceptible to rice sheath blight, bacterial panicle blight and straighthead disorder, and moderately resistant to blast.

MM17 is a semi dwarf , mid-season, medium-grain variety with excellent yield potential that averages 34” in height compared to 36” for Caffey. It is moderately susceptible to sheath blight, blast and bacterial panicle blight. MM17 was developed by SE Missouri State University (Malden Campus) and the Missouri Rice Research Farm in Campbell, MO.

Foundation Class

Missouri Rice Research Council

Essex, MO

(573) 225-0096

PVL04 (1994 PVPA Protection Anticipated) is a high yielding, early maturing, short stature Provisia rice line with great yield potential, good milling and grain quality and good looking tolerance compared with the current commercial variety PVL03. It has a semi-dwarf plant type and is moderately susceptible to lodging. PVL04 has the sample plant height as PVL03 and averages 88 days to 50% heading, which is 2 days later than PVL03. PVL04 is rated as susceptible to sheath blight & bacterial panicle blight, moderately resistant to leaf blast and has resistance to narrow leaf brown spot.

PEANUTS

ACI SPAN 17 (1994 PVP – Title V Protection Applied For) is a high yielding, high oleic oil Spanish/Runner hybrid variety. It has a decumbent growth habit with profuse branching as a runner type but has Spanish pod and seed characteristics and a mainstem significantly longer than Tamnut OL06 and ACI 236. ACI SPAN 17 is moderately resistant to TSWV and is adapted to the southwest and southeast U.S. peanut production regions.

GEORGIA-06G (1994 PVP – Title V Protected) is a large-seeded, runner-type peanut variety that was released in 2006 by the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-06G has a high level of resistance to TSWV. Georgia-06G combines high TSWV resistance with medium maturity and excellent yield and high TSMK grade.

Registered & Certified Class

Delta Peanut, LLC

Jonesboro, AR

(806) 759-7674

GEORGIA-09B (1994 PVP – Title V Protected) is a high-yielding, high oleic, TSWV-resistant, medium-seeded, runner-type peanut variety that was released in 2009 by the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia. Georgia-09B has a high level of resistance to spotted wilt disease caused by TSWV. Georgia-09B also has the high oleic and low linoleic fatty acid ratio for improved oil quality and longer shelf-life of peanut and peanut products. Georgia-09B originated from the first backcross made with Georgia Green as the recurrent parent. It has an intermediate runner growth habit and medium maturity, similar to Georgia Green. Georgia-09B has a medium runner seed size as compared to the larger-seeded, high oleic, runner-type variety, Florida-07.

Certified Class

Delta Peanut, LLC

Jonesboro, AR

(806) 759-7674

GEORGIA-16HO (1994 PVP – Title V Protected) is a large-seeded, high oleic, runner-type peanut cultivar. It has an intermediate runner growth habit, medium maturity, and tan testa color released by the University of Georgia. It also has a high level of tolerance to tomato spotted wilt virus (TSWV).
